Icon Set	179
Chapter 8 – Find and Replace.....	183
First Example of Find	183
Find Options.....	184
Find String Does Not Exist	189
Replace Options.....	190
Avoiding Error Messages	194
Chapter 9 – Macros	196
Running an Excel Macro	196
Chapter 10 – Range	198
Select Data Range.....	198
Select Data on Different Sheet.....	200
Range AutoFill	202
Range Offset	204
Named Range	205
Delete Name and Value	207
Subtotal Grouping	209
Multiple Row Subtotal.....	212
Select and Save Picture as PDF.....	214
Select and Save Picture as JPG	217
Determine Null (Nil) Value of Cell	218
Chapter 11 – Access DB to Excel.....	220
Read Data from Access To Excel	220
Chapter 12 – Speed	223
Slightly Increasing Speed.....	223

Fast Data Into Excel	224
Fast Excel Data To Array.....	227
Other.....	231
Using Speech with Excel.....	231
Adding Graphics as Pictures to Excel	232
Web Publishing.....	234

Chapter 3 – Getting, Changing, and Modifying Cell Data

The most common task performed with an Excel form is to put information onto the worksheet and retrieving information from the worksheet. We will explain some of the many ways to place information on to a form, manipulate the data, and then retrieve the information back into Xojo.

Add and Read Information

Here is a program which places two values on an Excel worksheet and then reads these values and shows them in a Xojo message box.

Code 9. Add and Read Information with Excel (Example3-1. xoyo_binary_project)

```
Dim excel as new ExcelApplication
Dim A, B as double
excel.visible = true
excel.workbooks.add

excel.Range("A1").value = "Gallons"
excel.Range("A2").value = 30
excel.Range("A3").value = "30.5"

A = excel.Range("A2").value
B = excel.Range("A3").value

MsgBox("A2 = " + str(A) + ", A3 = " + str(B))

Excel = Nil

Exception err as OLEException
MsgBox err.message
```

Highlighted in blue is the code which inserts the values: "Gallons", 30 and "30.5". Notice that the two numbers are added with and without quotation marks. In this case, excel treats them both as numerical values. Next, we read the values from cells "A2" and "A3" and place them in the variables A and B. Lastly, we show these values in a message box in Xojo. This simple example shows how information in both a string and numerical form can be added and retrieved from Excel.

The 'I Wish I Knew' series contains technical data and advice that makes sense and contains practical and numerous examples with explanations to allow you to ease into the steep programming curve. You can create Microsoft Excel applications today!

This book "I Wish I Knew How to ... Program Excel with Xojo in Windows" goes into the numerous options of programming Excel.

This guide uses the power of Xojo in conjunction with the power of Excel. The question is frequently asked 'why not just create the program in Excel?' The answer is confidentiality, security, and automation. It is relatively common knowledge that program created in Excel are not secure and can be easily modified to view the original formulas for calculating results – no matter how much protection has been placed in the original program.

There are over 10 chapters and contains over 220 pages with over 90 example programs. The book is a live document and will likely have updates in the future.

Examples include graphing, pivot tables, speaking in Excel, printing pages, saving Excel files to PDF, and more. Many screenshots have been added to show the results of the code with a full index to help find topics quickly.

This is one of many books at Great White Software. This book can be purchased at <http://great-white-software.com/rblibrary/> where many great Xojo and Real Studio resources are available.

Happy programming!

Eugene

Eugene Dakin MBA, Ph.D., P.Chem., is an author of Xojo and Real Studio reference materials and has many years of experience in the programming industry. Another great reference book is *I Wish I Knew How To ... Program Access with Real Studio Desktop Apps in Windows*.
